Of the Eclipse this Year 1664

There will be four Eclipses of the Luminaries this Year 1664. viz. two of the Sun, and as many of the Moon, of all which we in England shall only behold the last, which is a total Eclipse of the Moon, upon Wednesday the 27 of this month next night.

The first is a little Eclipse of the Sun upon the 14 day of January in the morning. The second is a great total Eclipse of the Moon upon Monday the first day of February. The third is a little Eclipse of the Sun, upon Tuesday the 18 of July. Concerning all these are invisible to us, I shall cease mentioning them any further.

The fourth and last is a great Eclipse of the Moon, which will exhibite itself to our view, if clouds hinder not upon Wednesday the 27 of July. The Dignis Eclipse begins 12 min. 44 sec. past 9 o'clock night: it ends 14 min. past 10 o'clock morning: its duration is full four hours time.

Besides these Eclipses of the Luminaries, there is also a small Mercurial Eclipse to happen this year 1664. upon Tuesday the 1 of October in the afternoon.

cover

cover all the best flowers and herbs from frosts and snows with
old rotten horse dung, look well to your cattle, water and keep
moist your meadows, let horses blood, and drink good wine and
strong drink, keep thy body warm clad, thy house warm and dry,
cast all care from you, and relieve those that are in want with thy
charity: Thus I have ended these Observations which are set
down for thy advantage, make good use of them and give God
the glory.

Warm cloaths, good fare, prepare ye must,
But use ye not excess in lust.

GOD give us all a merrie CHRISTMAS, and a happy New
YEAR.

But indeed

*No News this New-Year dare I sing,
Lest News foretold should Dangers bring:
Old Sinners, New Saints, GOD grant we be,
And that will work Felicitie.*

ENter the following Table, with the 5, 10, 15, 20, 25, or
30. day of your Moneth, finding your dayes aforesaid on the
Top, and Months on the Margent; and in the common angle
you will find (by inspection) the exact time that the Sun rises
the saids dayes: and by the rule of proportion for any interme-
diate dayes.

Example. I desire to know the time of the Suns rising the 15
day of April: I look in the Table, and I find that the Sun rises
the saids day, 36 min. past 4 in the morning. In like manner,
the 15 day of May, the Sun rises 39 min. past 3. The 15 of
June, 18 min. past 3. The 15 of July, 50 min. past 3. in
the morning, &c.

**A table shewing the exact time of the
Suns rising every fifth day, exact-
ly calculated for the Latitude of 56 degrees,
20 minuts.**

Names of the Months	The dayes of each Moneth.					
	5 day	10 day	15 day	20 day	25 day	30 day
January	8 21	8 12	8 3	7 53	7 42	7 29
February	7 18	7 6	6 55	6 43	6 31	
March	6 12	6 0	5 48	5 36	5 24	5 10
April	4 58	4 48	4 36	4 26	4 15	4 5
May	3 55	3 47	3 39	3 32	3 26	3 21
June	3 18	3 17	3 18	3 23	3 23	3 28
Iuly	3 35	3 42	3 50	3 59	4 9	4 19
August	4 32	4 42	4 54	5 5	5 17	5 28
September	5 42	5 54	6 3	6 17	6 29	6 41
October	6 52	7 4	7 16	7 27	7 38	7 49
November	8 1	8 11	8 20	8 27	8 34	8 39
December	8 42	8 43	8 42	8 40	8 36	8 31

Time of the Suns rising in hours and minurs.

But if ye would know the time of the Suns rising from any other immediate dayes, take difference and work by the Golden rule, and you shall find the proportionall part to be added if the dayes be increasing: and to be subtracted if the dayes be decreasing in length. The day increases in length from the time that the Sun passeth the Tropicke of Capricorn, untill he come to the Tropicke of Cancer: But decreaseth in length from Cancer to Capricorn, &c

If you desire to know the time of the time of the Sun-setting, Subtract the time of his rising from 12 hours, the remainder is the time of the Sun-setting, which having so found, double the same and you have the whole length of the day, whose complement to 24 hours is the length of the night.

Those

Those that desire to see practical examples what
will see it amply performed in the 22 Chapter of Mr. Gorges
Uranosopia, lately emitted, to which I refer you.

Strange Prophecies.

I N the beginning of this new year,
Strange wonders in Brittain shall appear :
Four Crowned Kings into a place,
Shall make great melody for a space :
The dead bones shall tumbled be,
From place to place which men will see.
The Botwels of the dead shall cry,
Unto quick men for melody :
A Herald shall lift on hie his back,
Whose voice shall make wilde Lions quake:
His Beard's of Flesh, his mouth's of Horn,
The like of him was never born.
This Herald's cane, his Garment's riven,
All shall be done 'gainst Fasterns Even.
